

**SEQUENTIAL THERAPY COMPRISING
20(S)-CAMPTOTHECIN AND AN ANTHRACYCLINE**

ABSTRACT

5

A method is provided for treating a patient having a disease associated with undesirable or uncontrolled cell proliferation, the method comprising: administering to the patient an anthracycline for a period of time during which a 20(S)-camptothecin is not present in a pharmacologically active form in patient's blood; and administering a 20(S)-camptothecin

10

to the patient.
